Population Estimates for Counties and Metropolitan Areas: July 1, 1991

INTRODUCTION

This report presents July 1, 1991 population estimates for counties and metropolitan areas (MA's) in the United States, together with their April 1, 1990 census counts. These estimates are consistent with the population as enumerated in the 1990 census, and have not been adjusted for census coverage errors.

The report also includes for counties, the components of population change—births, deaths, and residual change—between April 1, 1990 and July 1, 1991. The residual change component shown for each county primarily reflects net internal (domestic) migration and net international immigration, along with errors inherent in the estimating technique. The components of change for metropolitan areas are not shown because we did not have access to all the information needed to develop these numbers for New England metropolitan areas, where MA's are defined in terms of cities and towns, rather than counties.

For the county population estimates we used the Federal Tax Returns method (formerly known as the Administrative Records method), in which estimates of the components of change were added to a 1990 census population base to estimate the July 1, 1991 population. Reported birth and death statistics were used to estimate natural increase, and changes in Federal income tax returns were used to estimate net migration (see Methodology below). Two sources of information concerning the accuracy of the Federal Tax Returns method are (1) a paper presented at the August 1993 meeting of the American Statistical Association entitled, "Evaluation of 1990 Estimates and the Future of the Census Bureau's Subnational Estimates Program" by Michael J. Batutis, Jr. and (2) Technical Working Paper No. 5, "Evaluation of Postcensal County Estimates for the 1980's" by Sam T. Davis.

For New England MA's we used an experimental variant of the Housing Unit method, with building permit and demolition data to develop estimates of the housing inventory and the population of county parts included in each metropolitan area (see Methodology below). More information about this method will be presented in a forthcoming P25 report on State housing and household population.

EXPLANATION OF TABLES

The estimates are presented in four tables. Table 1 contains information for 3,141 counties and equivalent areas (including boroughs and census areas in Alaska,

parishes in Louisiana, the District of Columbia, and independent cities in Maryland, Missouri, Nevada, and Virginia) in alphabetical order by State. Table 2 presents July 1, 1991 population estimates for metropolitan areas and their constituent counties or equivalent areas, and New England county parts. Table 2A shows comparable estimates for New England County Metropolitan Areas (NECMA's), county-based alternative areas to the New England MA's. Table 3 ranks all MA's by 1991 population.

Although we do not show the components of change for MA's, the reader can calculate this information for the non-New England States and for NECMA's in New England states, by combining the component information listed with the county estimates found in table 1. The county components of change are available in the electronic version, see the Estimates Products section below.

Metropolitan Areas. The Census Bureau develops population estimates for MA's in response to the various statistical needs of Federal government agencies. The Office of Management and Budget (OMB) is responsible for defining MA's in the United States. OMB publishes standards used in defining MA's in the *Federal Register* prior to each census. After the census, the standards are used with the new census data to determine the boundaries of MA's and their component geography, then OMB announces a set of redefined areas based on these determinations.

The MA's in this report were announced by OMB effective June 30, 1993, and published in OMB Bulletin 93-17, "Revised Statistical Definitions for Metropolitan Areas." If an area has more than 1 million population and meets certain other requirements specified by OMB, it is termed a consolidated metropolitan statistical area (CMSA), and consists of two or more major components recognized as primary metropolitan statistical areas (PMSA's). All other areas are designated as metropolitan statistical areas (MSA's). The inventory of MA's includes 18 CMSA's, their 73 component PMSA's, and 250 MSA's in the United States. Puerto Rico, (one CMSA, three PMSA's, and three MSA's) is not included in this report.

METHODOLOGY

Methodology Used to Develop 1991 County Population Estimates.

The Census Bureau developed 1991 county population estimates with a variant of the Federal Tax Returns method. A major assumption underlying the model is that dynamic elements of population growth or decline (births, deaths and migration, plus fluctuation in the group quarters population) can be ascertained from administrative information. The noncensus data in this model are symptomatic of various aspects of population change.

The data we use to develop our estimates come from multiple sources. In addition to census and survey data, we use information from many Federal and State agencies. State agency information is often collected by members of the Federal-State Cooperative Program for Population Estimates (FSCPE), and reviewed and processed by Census Bureau staff. The FSCPE *Operational Guidelines* describe the role of state agencies in the annual production of population estimates.

With the exception of the net migration component, we calculated the components of change for July 1, 1991 county estimates from data items that were about a year old. We did this because the data we needed for the estimate period were not always available to us at the time we developed the estimate. For example, we could not obtain January to June 1991 births for most counties because 1991 birth data were not available at the time we prepared the estimate.

When we do not have data for the current year, we develop an estimate of the data component through a series of steps. We review data from past years to uncover any trends. If a trend is present, we extrapolate the trend forward into the current year. When a trend is not obvious, we simply use last year's data. A year later, we replace the initial estimates with "revised" estimates based on the actual data for all components of population change.

To develop the total population estimate, we first estimate each population change component separately. We have listed each of these components in table A and covered them step by step in the following text. For the July 1, 1991 county population estimates, the components of change cover the time period from the April 1, 1990 census to July 1, 1991.

Table A shows the steps taken in developing the Federal Tax Returns method estimate for a hypothetical county.

(Line 1) Base population. The base population for a 1991 county estimate starts with the April 1, 1990 census count as enumerated. Where applicable and possible, we included the following two changes to the census counts.

a. *Census errata.* All geographic corrections incorporated into 1990 Census Summary Tape File No. 1 are included in the base population. Geographic corrections discovered and corrected after that date will be incorporated in later revisions.

b. *Census modifications (MARS).* We modified the 1990 base population (1) so that persons responding "other" in the 1990 census race question were proportionately distributed into one of the four major race classifications: White, Black, Asian/Pacific Islander (API) or American Indian/Alaska Native (AIAN) and (2) to reallocate the population age distribution in order to compensate for a bias in misreporting age. (See 1990 CPH-L-74—"Age, Sex, Race, and Hispanic-Origin Information from the 1990 Census: A Comparison of Census Results with Results Where Age and Race Have Been Modified.")

(Line 2) 1990 military barracks population. These data, obtained from the 1990 census, refer to military personnel living in barracks. We assume that we capture information about military residing off base and on base in family housing in other data series.

(Line 3) 1990 other group quarters population. These data were obtained from the 1990 census and refer to the population under 65 in nonmilitary group quarters.

(Line 4) 1990 population age 65 years and over. These data were obtained from the 1990 census.

(Line 5) 1990 household population under 65 years of age. The residual household population in Line 5 was derived in two steps. From Line 1, we subtracted the nonhousehold population residing in group quarters (Lines 2 and 3), and then we subtracted the population age 65 years and over (Line 4 adjusted by an age factor that accounts for persons aged 64 at the beginning of the period who will be age 65 by the end of the period).

(Line 6) Resident births, 4/1/90 to 7/1/91. Births are recorded by residence and race of the mother, regardless of where the birth occurred. Since 1991 birth data were not available by county for all States at the time the July 1, 1991 county estimates were produced, we used 1990 county birth data to approximate 1991 births.

(Line 7) Resident deaths to the household population under 65 years of age, 4/1/90 to 7/1/91. We used death data tabulated by the most recent residence of the decedent. We estimated deaths to the population under age 65 years, and age 65 years and over using national mortality factors for the two age groups. We then ranked the estimated deaths so that they would (1) sum to the State totals and (2) sum to the total deaths by county as reported by the State departments of health, for the appropriate time periods. Since 1991

death data were not available by county for all states at the time the July 1, 1991 county estimates were produced, we assumed that 1990 county death data could be used to approximate 1991 deaths.

(Line 8) Immigration, 4/1/90 to 7/1/91. We estimated the number of immigrants who moved into the county during the period 4/1/90 to 7/1/91. We based our estimate on the national estimate of international migration developed by the Census Bureau. Our estimate includes emigration from the United States and the immigration of refugees, legal immigrants, and undocumented aliens. We have allocated the national estimate to States, counties, and places within counties by using a distribution algorithm based on the distribution of the foreign born who arrived between 1985 and 1990 and were enumerated as residents in the 1990 census. (See Technical Working Paper No. 1 by David Word.)

(Line 9) Migration base population. We applied the net migration rate (Line 10) to this base to obtain an estimate of the number of net migrants (Line 11). We developed the migration base by adding one-half of the following to the nongroup quarters population under age 65 (Line 5): resident births (Line 6), minus resident deaths under age 65 (Line 7), plus net immigrants (Line 8). Only half of the additions/deletions to the population would have taken place by the midpoint of the fifteen months, so a factor of one-half, or an "exposure factor" must be entered into the equation. The population base at risk of migrating is usually considered the base at the midpoint of the period since the population at the beginning of the estimate period has not yet experienced the births and deaths that are reflected in the population at the end of the period. The population at the end of the period will include net immigrants and exclude outmigrants. The best compromise seems to be taking the population at the midpoint of the period. (April 1, 1990 to July 1, 1991 resident births, deaths under age 65, net immigration from abroad, and net movement are assumed to have been evenly distributed throughout the period and, therefore, exposed to the potential for migration, on average, for one-half of the period).

(Line 10) Migration rate. We used individual Federal income tax returns to measure the migration of the population under age 65, by matching the returns for successive years for that age group. We determined the status of the filer by noting the place of residence on tax returns filed in the base year (1990) and in the estimate year (1991). We categorized the filers in each county into (1) immigrants (INS), (2) outmigrants (OUTS), and (3) nonmigrants (NONMOVERS). We derived a net migration rate for each county, based on the difference between the immigration and outmigration of taxpayers and dependents. We applied the net migration rate for persons under age 65 to the migration base population (Line 9) to yield an estimate of net migration for the population under age 65 in the county.

(Line 11) Net migration. Net migration is the product of the migration base (Line 9) and the net migration rate (Line 10). If this figure is preceded by a minus sign (-), then the figure indicates net outmigration; otherwise, the figure represents inmigration.

(Line 12) 1991 military barracks population. We usually obtain updated barracks information from a survey of on-base housing facilities for unaccompanied personnel. The survey is conducted by the Department of Defense (DOD) in September each year. We augment barracks figures for naval installations with information about crews of home-ported ships not deployed in foreign waters. We obtained these figures from the U.S. Department of Navy. Because 1991 DOD survey results were not available when we developed the July 1, 1991 population estimates, we assumed that the 1991 figures were identical to those for 1990. (See Line 2)

(Line 13) 1991 other group quarters population. Since appropriate survey information was not available when we prepared the 1991 estimates, we assumed the 1991 figures were identical to those reported for 1990. (See Line 3)

(Line 14) 1991 population age 65 years and over. We use county-level Medicare enrollee information from the Health Care Financing Administration to estimate the population age 65 and over. 1991 Medicare enrollment data were not available at the time we prepared the 1991 estimates, so we applied a 1990/1989 Medicare enrollment change ratio to 1990 Medicare data to obtain an estimate of the 1991 enrollee numbers. We used the 1991 enrollee estimate to calculate the population age 65 and over in 1991.

(Line 15) Preliminary estimate. The sum of the household population base (Line 5), plus births (Line 6), minus deaths (Line 7), plus net immigration (Line 8), net migration (Line 11), barracks population (Line 12), other group quarters (Line 13), and the population age 65 and over (Line 14).

(Line 16) State control factor. This factor is developed by dividing the July 1, 1991 state population estimate by the sum of the preliminary county estimates for that State (Line 15).

Final estimate (Line 17). (Line 17)=(Line 15) x (Line 16).

Methodology Used to Develop 1991 Metropolitan Area Population

The Census Bureau developed estimates of the 1991 population of metropolitan areas by aggregating the population estimates of the geographic components of

Table A. Worksheet for Derivation of the July 1, 1991 Population Estimate for a Hypothetical County

| Component | Value | Derivation or source |
|--|----------|--|
| 1. Base population..... | 93,401 | See text for detailed source |
| 2. 1990 military barracks population | 1,384 | See text for detailed source |
| 3. 1990 population in other group quarters | 4,276 | See text for detailed source |
| 4. 1990 population age 65 years and over..... | 4,021 | See text for detailed source |
| 5. 1990 household population under age 65 years..... | 83,417 | (5) = (1) - (2) - (3) - { [1.0 + age factor] x(4) } |
| 6. Resident births: 4/1/90 to 7/1/91 | 1,924 | See text for detailed source |
| 7. Resident deaths to the household population under age 65 years..... | 157 | See text for detailed source |
| 8. Immigration: 4/1/90 to 7/1/91 | 164 | See text for detailed source |
| 9. Migration base population..... | 84,383 | (10) = (5) + 0.5 x {(6) - (7) + (8)} |
| 10. Migration rate..... | -0.00943 | From matched IRS returns |
| 11. Net migration | -796 | (11) = (10) x (9) |
| 12. 1991 military barracks pop | 1,384 | See text for detailed source |
| 13. 1991 population in other group quarters | 4,276 | See text for detailed source |
| 14. 1991 population age 65 years and over..... | 3,720 | See text for detailed source |
| 15. Preliminary estimate | 93,932 | (15) = (5)+(6)-(7)+(8)+(11) +(12)+(13)+(14) |
| 16. State control..... | 1.00610 | 7/1/91 State estimate, divided by sum of counties |
| 17. Final estimate..... | 94,505 | (15) x (16) |

MA's—counties and equivalent areas. This approach allowed us to produce population estimates for most metropolitan areas, including the NECMA's in New England displayed in table 2B. (See 1990 CPH-I-18, *A Guide to State and Local Census Geography*, "Counties" page 5, for more information about counties and equivalent areas.)

Although NECMA's provide a county-based alternative to the MA's in New England, the official New England metropolitan areas are defined in terms of cities and towns, subsections of county geography that must be estimated separately. We used a variation of the Housing Unit method for estimating the population of subareas in the New England MA's:

$$P91 = (HU91 * VAC90) * PPH90$$

Where: P91 = July 1, 1991 Population Estimate
 HU91 = July 1, 1991 Housing Stock Estimate
 VAC90 = April 1, 1990 Vacancy Rate
 PPH90 = April 1, 1990 Persons Per Household (PPH)

1. We assumed that the relationship between county and subcounty vacancy and PPH rates were unchanged between April 1, 1990 and July 1, 1991.

2. We used an estimate of the 1991 Housing Stock for each subcounty area to develop preliminary population estimates.
3. We summed these subcounty area estimates, raked them to the 1991 county population estimate, and developed revised estimates.
4. The revised subcounty area estimates were then summed to 1991 New England MA population estimates, (June 1993 definition).

ESTIMATES PRODUCTS AND REVISIONS

The Population Division Statistical Information Staff (301-763-5002) should be the first point of contact for most questions concerning population estimates. Report tables on diskette may be ordered from the Information Staff. The 1991 county estimates in this report were released in an electronic file, EST91CNT.ARC, in fall 1992 on the State Data Center Bulletin Board (301-763-7554). Census Bureau Regional Offices can assist the data user with this file.

Revised 1991 county and metropolitan area population estimates along with 1992 estimates are scheduled for release in late 1993. Comparisons made in the 1980's suggest that revised estimates differ from the series first released by about 1 percent on the average, regardless of sign.

Table 1. Population Estimates for Counties on July 1, 1991 and Components of Change:
1990-1991

| State and county | July 1, 1991 (estimate) | April 1, 1990 (census) | Change, 1990-1991 | | Components of change, 1990-1991 | | | Net residual change | |
